Connecting Strategies is Simple with RG!

1

Using our RG Strats

2

Copy Strategy

1. Click Strategies

2. Click to View Strategy Stats to evaluate it's suitability to your risk/reward aims(see next page).

3. Click 'Copy Strategy' or 4. tick to agree to the risks associated with the trading activity.

5. Select your exchange from the list, we strongly suggest you test strats on demo first.

Please read carefully and understand the risks mentioned below:

- ☒ By using this strategy you accept all of the risks associated with the activity and should not use funds you are not prepared to lose
- ☒ Ensure your account can support the drawdown and any additional positions added.
- ☒ Test using demo first before deploying real capital.

[Cancel](#) [Accept & Continue](#)

6. Enter your account balance, select leverage, and how many lots. We suggest 1:30 for best value broker fees and then your lots size. The input gives you some guidance on the amount per lot in USD and the % of your account balance you are using. **Always keep spare at least 25-30% of your balance for drawdown during a trade, and bear in mind losses do happen, see the stats.**

Choosing an RG Strat

RG Strats can be used to place orders on your brokerage account or crypto exchange without needing to use TradingView. We have optimised the strategies through backtest data to ensure the best possible trading opportunities whilst minimising losses. It is still however possible to have losing trades, but the strategies more longer term will be gaining more than they lose.

When choosing an RG Strat, take note of the performance data such as the **Profit Factor**, the **Total Returns %**, the **Win Rate** and the **Daily Profit**. A profit factor(PF) must be greater than 1, this is break even, so aiming for a PF of 1.5 means you are making \$1.5 for every \$1 that you lose. Some of our strategies such as Session Magic are giving a PF of 1.87+ and some are even higher. The winrate should be greater than 90%, some of our strategies are 98%+.

RG STRAT - Session Magic XAUUSD

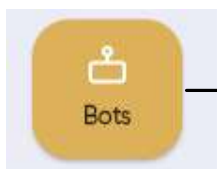

The Take Profit and the Stop Loss used in the strategy is mentioned in the strategy Description. These are optimised values and not adjustable by the user, the SL can be very deep, but you can make some changes, see below. Note: **FPMarkets** and **ICTrading** have both crypto and futures available as their asset pairs, so you can use those instead of Binance or BingX to access more market diversity. They also allow you to fund your account with crypto or fiat.

Overriding and Managing Risk In Your Automated Trades

When a strategy is in operation and your trade is in loss, you can still manually close the trade in your platform (cTrader, Binance, IG, BingX etc) if you think the market may turn against your trade, you can manually set an 'earlier' stoploss and take profit levels in your platform on the current trade. This can prevent getting stuck in an unproductive trade for hours. The below buy trade labelled **SM-NASLONG-3** in cTrader was placed by **RG Strat** on US100, after the lower support was found I moved the SL below it.

What Can I Trade and Where?

TradingView Only: These bot are used for your own TradingView strategies using asset pairs from IG(Capital) & Binance(api).

Strategies / RG STRATS you can Copy an existing Strategy, add your margin and the bot appears in Bots listings as RG STRAT.

You connect the RG STRATS to Binance, IG Demo, CTrader Live/ Demo, BingX and Hyperliquid accounts.

What Assets & What Leverage Should I Trade?

When using automated trading it is important to use leverage levels which are suitable for the account and margin you are trading with. The **RG strats** have built in stoploss so you are pre-committed to a certain drawdown which in some situations of deep draw down, have potential to blow the account especially if the margin is too high for the account and there may be multiple trades open at once.

Using high leverage such as 50:1 or greater can increase this risk a lot. For this reason we suggest only using 70-75% of your account balance for your trades, this leaves around 30% for drawdown and sudden market changes helping you to ride out the adverse conditions.

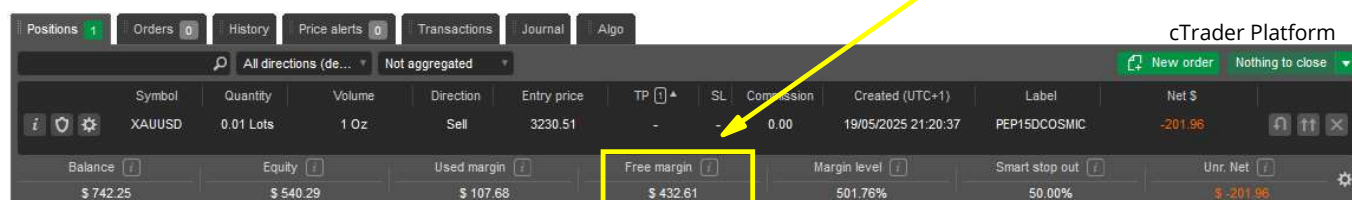

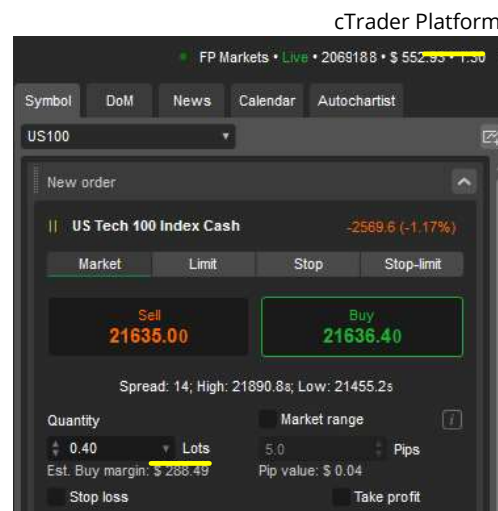

From experience, we have found that it's best to start with a maximum of 2 trades open at once until you have proven the strategy to yourself by using it on Demo for a number of weeks. Also avoid going for home runs by allocating too much margin to a single trade, If you have a \$3000 account, just allocate around \$300-\$400 per trade to get a feel for the thresholds and how the trades play out, this can take a few weeks to become familiar with the wins, the losses and the timescales.

Our best performing strategies are **Session Magic** with **NAS100** and the **US500** with 2 or 3 trades each per session, or **PolkaDOT** with SOL or BTC, start with those on demo accounts with Pepperstone, FP or IC, these are excellent brokers, the latter two also have crypto assets for non-UK residents.

Setting the Margin Size / Lots

When copying an **RG Strat** you need to select the margin size in the form of lots. These vary depending on the leverage of the account and the price of the asset, but if you use cTrader platform, it's very easy to see what the \$USD value is for the lot size, and then dial that into the **RG Strat** you are setting up. The leverage for the account is set when you first create the demo or live account in your broker's admin panel.

The FPMarkets cTrader platform to the right shows that on **1:30** leverage account, US100(Nasdaq), **0.4 lots = \$288 margin** from the balance. Which from an account with balance of \$552 is 52%, so it would be unwise to add another trade to such an account size, but you could halve the lots to 0.2 and then setup another RG Strat of a similar size, which leaves 50% **Free Margin** in the account for potential drawdown during the trades.

How to Connect your Broker Accounts to RG Automations.

4

<https://www.richgoon.app/>

cTRADER ID

RichGoon.app uses cTrader trading platform for many of our Broker integrations. Before joining a broker, make sure they support cTrader (see list at end) and that you have a cTID account from the following link. **Then use that same email address for the broker account registration.**

Setup your cTID Credentials: <https://id.ctrader.com/> Get the app: <https://ctrader.com/download>

cTrader & TradingView: Currently we directly support the following cTrader brokers: **Pepperstone, ICTrading, fpmarkets** and prop firm **FTMO**.

TradingView Only: IG(demo) & Binance(api) are setup via 'Bots' screen

Broker Links:

Start with a demo acct

 **pepperstone**

 **iCTrading**

 **fpmarkets**

 **IG MARKETS**

 **BINANCE**

Once you have signed up to the brokers, they will appear in the cTrader app drop down menu. Additionally, only you can control these accounts through manual trade control in cTrader app or through sending strategy signals from Trading View to RG then to broker or using RG Strats.

Connecting your cTrader accounts to RG.

Once you have your cTrader broker account via your cTID email, you will be able to connect one demo and one live account to **RichGoon.app**. In RG, click Exchanges and then click on cTrader Demo or cTrader Live. This will open a popup where you can select which cTrader broker account to authorise for your session. **Note: Only 1 x demo & 1 x live cTrader account can be connected to RG at the same time.**

Watch Video

Use Rg STRAT
<https://bit.ly/rg-strat-broker>

Once connected, all bot signals through your cTID cTrader account will go to this broker account, but only if the symbol sent is recognised and there are funds available for the lots size sent, otherwise the trade will be rejected by the broker.

eg: For SPX500, Pepperstone uses the symbol **NAS100** and ICTrading uses **US100**, FTMO uses **US100.cash**. This is only something you need to be aware of if creating TradingView Alert Messages through RG.

We provide the alert message with the symbol name when you create a new bot (panel left) so you can paste them into TradingView for your own strategies, you can also find the relevant symbol name in cTrader app for the asset, and we have a spreadsheet here you can refer to.

If you want to use **RG Strategies** you do not need to use TradingView at all, the signals can go straight to your cTrader broker account selected in the setup. You can know which account this is by checking the account numbers in the **Exchanges** tab and check this with the account in your cTrader app so you can monitor the trades and if needed, exit a trade or take early profit, **you remain in control!**

Strategies We Use With TradingView and RG Strats

Session Magic NAS100 2TLS 30s

This **Session Magic™** strategy is one of our most reliable high-performing strategies. It is optimised to leverage the liquidity which is available at pre-market and the open. Session Magic™ is suited to the largest US futures such as Ndaq.

Session Magic™ opens 2 or 3 trades Long or Short from 1 hour before the NY bell by marking the first 10 bars and using those as references for price breaking out and retesting the breakout level.

You can create an **RG STRAT** using the pre-configured **Session Magic™** Strategy or Subscribe to the Trading View Premium link > and configure SM yourself.

Suitable for Futures
NAS100, US500, US30,
GER40, XAUUSD, BTC

Typical Performance
94 - 100%
17/18 Trades Profitable

Get **TV STRAT**

Use **Rg STRAT**

GapStrat PLTR 1% TP 1m

This **GapStrat™** strategy is another high-performing strategy. It is optimised to leverage the liquidity which is available at pre-market and the open. **GapStrat™** is most suited to the largest US stocks which open at 9.30AM EST, 2:30 GMT.

GapStrat™ opens a single trade in the direction of the Gap, but at an estimated pullback which is determined by a bar delay of say 5 bars. This is tuned to each asset using backtest data. With this strat the TP level is also larger than Session Magic™ due to the inertia and volume which large stocks have.

Suitable for Stocks
TSLA, AMD, NVDA,
AAPL, SMCI, AVGO.

Typical Performance
90%
50/55 Trades Profitable

Get **TV STRAT**

Use **Rg STRAT**

Creating Your Own TradingView Bot Via Webhook

If you are already familiar with TradingView and creating your own strategies, RichGoon.app can give you the ability to connect your strategy to our supported brokers and exchanges.

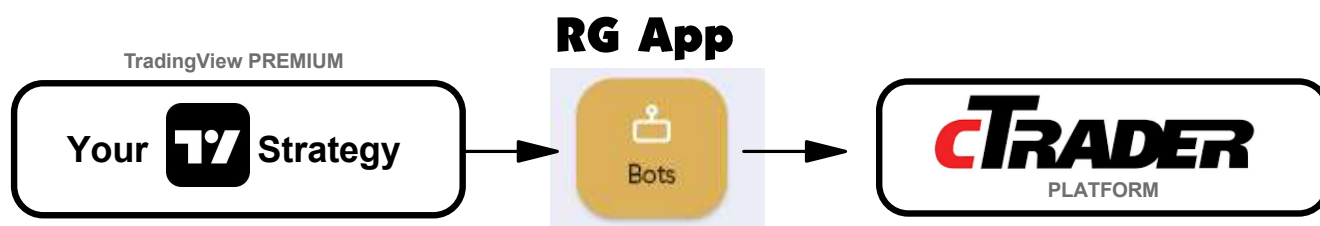

Use TV STRAT

<https://bit.ly/rg-tv-fp-demo>

Now, for the first time you can connect TradingView to automatically trade strategies with the Nasdaq, SPX500, DOW30, FTSE, Russell 2000, DAX40, Stocks such as Tesla, NVidia, Bonds, ETF's, Commodities; Gold, Silver, Coffee, Wheat and many more (*provided we have added the pair*).

You need to have a broker account such as **Pepperstone**, **FPMarkets** or **IC Trading** for sending the trading signals to and have pre-written your strategy with suitable buy, sell, close alerts. The above video link shows the hookup method.

Strategy Commands:

Long Entry* = buy
 Short Entry* = sell
 Long/Short Exit* = close
 Long/Short TP = TP
 Long/Short SL = SL

Your strategy must send at least *

Create Bot:

Select **Exchange**.
Demo or Live
 Select **Trading Pair**.
 Label Bot
Start Bot

Copy TradingView Alert/webhook

```
{
  "bot_id": "17498047891530",
  "symbol": "US500",
  "signal": "{{strategy.order.alert_message}}",
  "qty": "{{strategy.order.contracts}}",
  "key": "4386"
}
```

Webhook URL

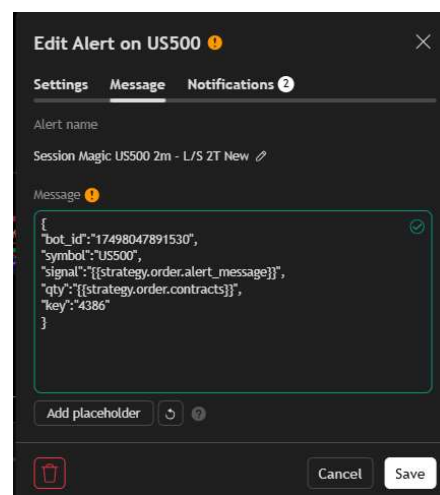

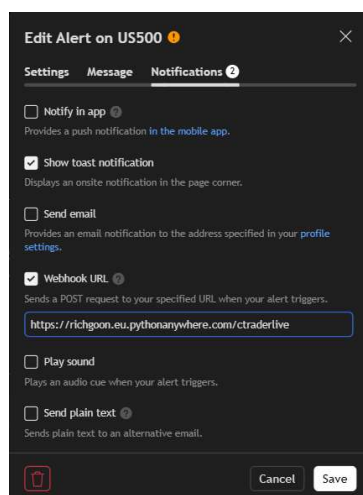

<https://richgoon.eu.pythonanywhere.com/ctraderlive>

Paste into Trading View Webhook URL

Step by Step TV Bot

1. Add your **cTID** or **API** credentials to connect to the **Exchange** you wish to use.
2. Click on **Bots / Create Bot**.
3. Name **Strategy**, Select **Exchange**, **Pair**
4. Start Bot (This builds the bot code)
5. Click **Active Bots**, select your Bot
6. Click **TradingView Settings** for code.
7. In TradingView, **Create an Alert** on your asset eg: **US500/pepperstone**.
8. As the **Condition** select your strategy and custom name it.
9. Copy/paste Alert and Webhook code from RG Bot into your TradingView Message window.
10. **Check all is correct** and **SAVE**, the bot is now running on cloud.

You can **pause your bot** from sending signals in TradingView 'Alerts' or in RG bot

Paste into Trading View URL

Margin Quantity

The margin / lots for a strategy is very critical. The strategy can set this in your code, or you can use the properties tab for your TV strategy to set the **Order Size** which transmits into RG "qty": "{{strategy.order.contracts}}", message to your RG bot. However, it can be more flexible to adjust this in the message as follows: **"qty": "0.5"**, (for 0.5 lots) make sure you replace the full curly bracketed {{strategy.order.contracts}} with a number of lots you wish the strategy to use and keep the quotation marks, if there is an error the alert will highlight in red.

Bot Stats		
RichGoon Trading Bots Strategy		
Exchange	Status	Signal

Adding RG Trade Alerts Into Your TradingView Strategy

If you are wanting to have your own strategies connect with RG App, you will need to be sending the correct buy, sell, close signals from your strategy. The following code may be added into your pinescript strategy code. These codes will also appear as text fields in the input tab of the strategy and can be changed in there for brokers such as BingX who do not use the close signal.

RG Strategy Commands:

Long Entry* = buy
 Short Entry* = sell
 Long/Short Exit* = close
 Long/Short TP = TP
 Long/Short SL = SL

Your  Strategy

Strategy Alert Messages

Insert this code above your strategy entry/exit code, we are using only buy,sell and close*, but TP, SL, TP1,TP2 and TP3 may also be used where appropriate.

```
//ALERTS {
i_alert_txt_entry_long = input.text_area(defval = "buy", title = "Long Entry Message", group = "Alerts")
i_alert_txt_entry_short = input.text_area(defval = "sell", title = "Short Entry Message", group = "Alerts")
i_alert_txt_exit_long = input.text_area(defval = "close", title = "Long Exit Message", group = "Alerts")
i_alert_txt_exit_short = input.text_area(defval = "close", title = "Short Exit Message", group = "Alerts")
i_alert_txt_exit_TP = input.text_area(defval = "TP", title = "TP Exit Message", group = "Alerts")
i_alert_txt_exit_SL = input.text_area(defval = "SL", title = "SL Exit Message", group = "Alerts")
i_alert_txt_exit_TP1 = input.text_area(defval = "TP1", title = "TP1 Exit Message", group = "Alerts")
i_alert_txt_exit_TP2 = input.text_area(defval = "TP2", title = "TP2 Exit Message", group = "Alerts")
i_alert_txt_exit_TP3 = input.text_area(defval = "TP3", title = "TP3 Exit Message", group = "Alerts")
//}
```

Insert into your **Strategy Long Entry**, the parts in bold, your code may look different.

```
strategy.entry("Long", strategy.long, qty=globalQty, alert_message = i_alert_txt_entry_long)
```

Insert into your **Strategy Short Entry**, the parts in bold

```
strategy.entry("Short", strategy.short, qty=globalQty, alert_message = i_alert_txt_entry_short)
```

Insert into your **Strategy Exits, Stop Losses or Take Profits** the parts in bold, your code may look different.

```
// Close Long
if strategy.position_size > 0
    percentExit = strategy.position_avg_price * (1 + takeProfitPercent / 100)

    strategy.exit("Exit Long", "Long", qty=globalQty,
        stop = strategy.position_avg_price * (1 - stopLossPercent / 100),
        limit = percentExit,
        comment_loss = "SL",
        comment_profit = "? TP",
        alert_message = i_alert_txt_exit_long)
```

```
// Close Short
if strategy.position_size < 0
    percentExit = strategy.position_avg_price * (1 - takeProfitPercent / 100)

    strategy.exit("Exit Short", "Short", qty=globalQty,
        stop = strategy.position_avg_price * (1 + stopLossPercent / 100),
        limit = percentExit,
        comment_loss = "SL",
        comment_profit = "? TP",
        alert_message = i_alert_txt_exit_short)
```

cTrader Compatible Broker Accounts for RG Automations.

If you are already familiar with TradingView and creating your own strategies, RichGoon.app can give you the ability to connect your strategy to an unlimited selection of cTrader compatible brokers and exchanges.

Even without using TradingView you can use our strategies to place trades on your broker account through a smaller list of cTrader compatible brokers such as Pepperstone, FPMarkets or IC Markets.

Any broker or prop firm which supports cTrader (cTID) can be connected to RichGoon if you are using your own TradingView strategies.

cTrader/RG Supported Live Broker Accounts

Ctrader connects with these live account brokers and trades may be placed through **RG STRATS** or **TradingView**. RG Strats have a more limited selection of assets, these are shown on the next page in Gold.

Pepperstone (top reviews):	https://pepperstone.com/
IC Trading (top reviews):	https://www.ictrading.com/en/
FP Markets (top reviews):	https://bit.ly/fpm-rg

cTrader/RG/TradingView Supported Prop Firms

Ctrader connects with these prop firms and can be connected with **TradingView** strats via **RG Bots**:
The assets can be any asset pair in our bots setup which are shown in black on the next page

Alpha Capital:	https://alphacapitalgroup.uk/platforms/
FTMO(top reviews):	https://ftmo.com/en/
Funding Pips:	https://fundingpips.com/
Blackbull Markets:	https://blackbull.com/en/platforms/ctrader/
TOP FX:	https://topfx.com/sc/en
Varianse:	https://varianse.com/en/ctrader/
FxPRO:	https://www.fxpro.com/trading-platforms/ctrader
Skilling:	https://skilling.com/eu/en/trading-platforms/skilling-ctrader/
SC Markets:	https://scandinavianmarkets.com/platforms/ctrader/
TradeView Markets:	https://www.tvmarkets.com/en/trading/platforms/ctrader/

Caution: Check your prop firm allows trades to stay open overnight and at weekends.

In an **FTMO Challenge or Verification**, you don't have to close positions overnight but some prop firms do. Also once you pass all the challenges, the terms for trading hours can also change and cause the loss of an account if you trade out of hours and on certain holidays, please check these terms with each prop firm.
